

Static and Final

Welcome to
TestLeaf

Agenda - What We'll Cover Today

- ▶ What is static keyword
- ▶ Unique feature about static
- ▶ Few example about static usage in real time

Static

A low-angle, upward-looking perspective of a modern skyscraper with a glass facade. The building's structure is composed of numerous vertical and horizontal lines, creating a strong geometric pattern. The sky is a vibrant blue with scattered white clouds. The overall image conveys a sense of height, modernity, and upward movement.

Use this font color to pin point something important

When a variable is declared with the keyword “**static**”, its called a “class variable”. All instances share the same copy of the variable. A class variable can be accessed directly with the class, without the need to create a instance

- Static can be used in method e.g. `public static void method() { .. }`
- Static can be used to declare variable e.g. `static String name = "Hi";`

Static keyword applicable

Java static property is shared to all objects

We can apply java static keyword with variables, methods, blocks and nested class

```
public class CrunchifyStaticDeclaration {  
  
    // 1st static block  
    static {  
        System.out.println("\nI'm static block 1..");  
        setTestString("This is static block's String");  
        setTestValue(2);  
    }  
  
    // 2nd static blocks in same class  
    static {  
        System.out.println("\nI'm static block 2..");  
    }  
  
    // static variable example  
    private static int testValue; // kept private to control it's value through setter  
  
    public int getTestValue() {  
        return testValue;  
    }  
  
    // static method example  
    public static void setTestValue(int testValue) {  
        if (testValue > 0)  
            CrunchifyStaticDeclaration.testValue = testValue;  
        System.out.println("setTestValue method: " + testValue);  
    }  
}
```

Where ever static is applicable

Quiz

Are you ready to
Get going?

1. what is static in java?
2. Why we use static keyword in java?
3. What is static variable in java?
4. what is static method in java with example
5. what is static block in java?
6. What is the need of static block?
7. Why main method is static in java?
8. Can we overload static methods in java?
9. Can we override static methods in java?
10. Can we write static public void main(String [] args)?

Question related to static

Final keyword in java

Are you ready to
Get going?

Once a final variable has been assigned, it always contains the same value.

Example :

Can we change our spouse name or marital status ?

Can we allow anyone to override / change PAN number

Few example about Final

Final Keyword

- * Restrict changing value of variable
- * Restrict method overriding
- * Restrict inheritance

Tutorial4us.com

final

- final keyword is used declare **constants** which can not change its **value** of **definition**.
- **final Variables** can not change its value.
- **final Methods** can not be Overridden or Over Loaded
- **final Classes** can not be extended or inherited

- Final can be used in class e.g `public final class myClass { ... }`
- Final can be used in method e.g. `public final void myMethod() { .. }`
- Final can be used to declare variable e.g. `final String name = "Test";`

Final keyword applicable

Static	Final
Applicable to method and variable	Applicable to class, method and variable
It always holds last updated values	Values can't be update / override
Static block are available and used to load before the object creation / constructor invoke	There is no concept called final block in java
No need of instance / object to call method and variable	There is object / instance required to call method or variable
Variables can be initialized anywhere in the class	Variables can be initialized only in constructors

Difference between Static and Final

Quiz

Are you ready to
Get going?

1. **What is the use of final keyword in java?**
2. **What is the blank final field?**
3. **What is the use of final class?**
4. **Where all we can initialize a final non-static global variable if it is not initialized at the time of declaration?**
5. **What are final class, final method and final variable?**
6. **Can we declare constructors as final?**

Question related to static

Recap

A low-angle, upward-looking shot of a modern skyscraper with a glass facade. The building's structure is composed of numerous vertical and horizontal lines, creating a strong geometric pattern. The sky is a vibrant blue with scattered white clouds. The overall composition is dynamic and emphasizes the height and modernity of the architecture.

Are you ready to
Get going?

- Static
 - ✓ Static keyword can be used only in methods and variable NOT for Classes
 - ✓ Object is not needed to call static methods and variables
 - ✓ Static block will be invoked even before the constructors and normal methods
 - ✓ Static variables can be override but methods can't be override
 - ✓ Static always refer last updated values
- Final
 - ✓ Final keyword can be used in methods, variable and for Classes also
 - ✓ Final methods , variables can't be override
 - ✓ There is no empty final block like static block
 - ✓ Object is needed to invoke final method and variables
